Reference Manager 11

Bibliographies Made Easy on your desktop and the Web

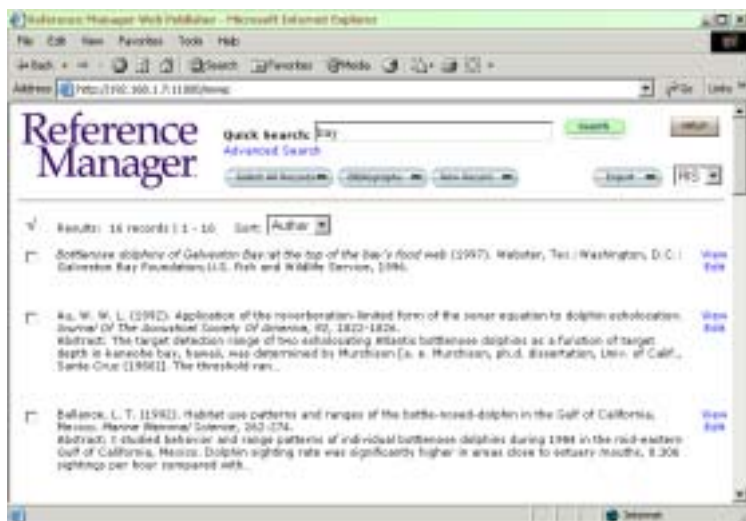

What's new in Reference Manager 11?

Reference Manager v11 delivers new ways to view and use your reference collections.

Whether you want to post your database to the web, collaborate over a network, or link to full text files, Reference Manager v11 is the centre of all things reference related.

And with ISI ResearchSoft's complementary new product, **RefViz**, you can now view literature in a visual landscape. Reference Manager is used worldwide to search online bibliographic databases, organise references and create instant bibliographies.

Post databases
on the web

New Features include:

- **Post your Reference Manager database to the Web or an Intranet.**
- **Create a Subject Bibliography with topic headings.**
- **Export references from a travelling library.**
- **Connect to data visualisation tools** (see inside for information on new RefViz software).
- **Select your favorite internet search once - Reference Manager now remembers it for future searches.**
- **Export references in XML format for use with other applications.**
- **Connect to your institution's online resources with OpenURL Record Links - locate full text articles faster.**
- **Use the network versions MSI service for easy installation on multiple workstations.**

System Requirements:

Windows 2000/XP

- Pentium or compatible with CD-ROM drive
- Hard disk with 90MB available
- 128MB RAM
- Internet connection required to search internet databases
- Cite-While-You-Write feature compatible with Word 2000, XP, 2003
- Add-in feature compatible with WordPerfect 2000, 2002, 2003

To run Web Publisher you need:

- A computer running Windows 2000/XP with persistent access to the internet/intranet via TCP/IP.

Network Requirements

- Operating System: Windows 2000/XP. NB: Windows 2000 version 2 or higher must be installed on the server and workstation to use the MSI installer.
- 133MHz or higher Pentium-class CPU with CD-ROM drive
- Hard disk with 90MB available
- 128MB RAM
- Network card, network connectivity.

BioScope

Bringing Science to Life

Just released! **The Living Cell**. Number two in the BioScope Cell Series.

Areas covered include Gel Electrophoresis, Histology, Nutrition, Cellular Transport and Bioethics.

BioScope is a revolutionary method of teaching science via an interactive CD and web links. The quality and depth of material is breathtaking. Such is the scope and presentation of material, BioScope can be used to teach biology to students from late primary school to early university. The result of millions of dollars of investment from the National Science Foundation, Purdue University has produced the ultimate biology teaching tool!

The CDs are priced to be accessible to every student in biology and will run on Windows and Macintosh computers. Single user copies are available for only **\$132.00**. However, as a **special offer** to Research News readers, BioScope CDs are reduced to only **\$99.00**. You must use the order form at the back of this newsletter to qualify for the special offer.

BioScope includes:

interactive games, quizzes, activities, animations, videos, microscope and 3-D images and significant web links as well as the BioScope World Web Portal.

**The Interactive CD-ROM Set
Making High School Biology an
Exciting Learning Experience**

Two CDs in the **Cell series** currently available
Cell Structure and Function
The Living Cell

SPECIAL OFFER!

**Available for both Windows
and Macintosh.**

ProCite

Version 5.03 is now available FREE!

ISI ResearchSoft has developed an update for ProCite for Windows to address the changes at PubMed.

To receive this free update on CD-ROM, please send us your program details (serial number, registration details) and mailing address.

Note:

There is no patch which you can download in order to update to v5.03. The only way to update is from the CD-ROM.

Exhibition Dates

Come and see us at:

Combio 2004

26-30 September 2004
Perth.

Australian Health & Medical Research (AHMR) Congress

21-26 November 2004
Darling Harbour, Sydney.

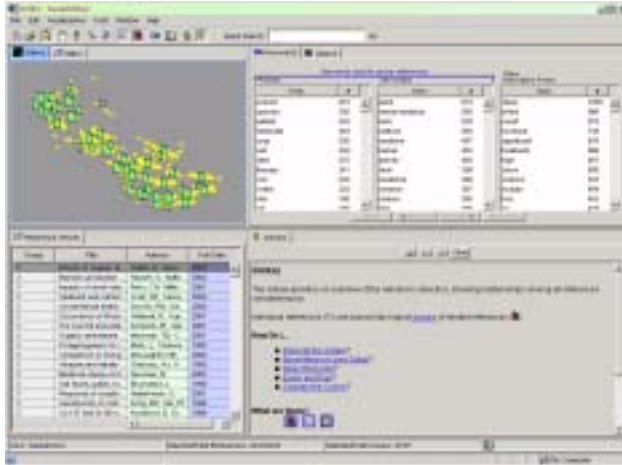

Information On-Line 2005

1-3 Feb 2005
Darling Harbour, Sydney.

RefViz™

**Explore research literature
– visually !
A new concept in reference
analysis.**

RefViz is an essential tool designed to help researchers evaluate references easily, plan future projects and publish their work. Explore by theme, not by keyword!

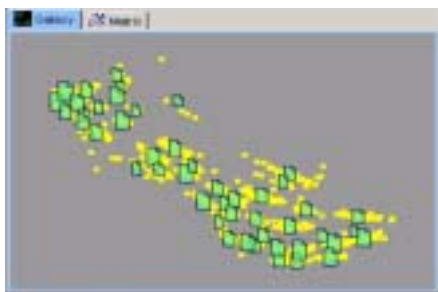

- RefViz provides users with a powerful way to explore reference literature visually. It analyses large numbers of references by thematic content and presents an at-a-glance overview of the main topics discussed in the reference set.
- RefViz allows researchers to cast a wider net when searching the literature, broaden their understanding of a field, and easily focus on areas of interest.
- RefViz creates overviews of literature search results from popular databases such as ISI Web of Science, OCLC, and PubMed; or bibliographic management software— Reference Manager, ProCite and EndNote.

Used together with Reference Manager, ProCite and EndNote, RefViz provides an additional level of analysis to existing reference collections and lets users find the most relevant citations for their papers.

How Does it Work?

RefViz processes each dataset with an unbiased review of all terms found in the title and abstract/notes fields. It essentially groups the literature the same way you would stack papers. Two visualisations are provided to review the literature: the galaxy and the matrix.

The Galaxy view

RefViz analyses large numbers of references by thematic content and presents an at-a-glance overview of the main topics discussed in the reference set. The Galaxy view organises references into groups according to how they are related conceptually.

The Galaxy view at the left shows the results of searching for a term throughout the dataset.

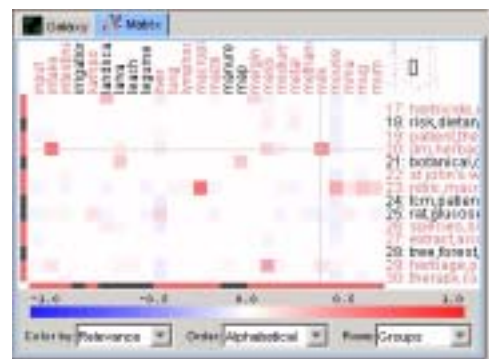

The Matrix view

RefViz highlights associations between terms by presenting a review of which subjects tend to be discussed together in the literature (terms vs. terms), or an overview of the major concepts discussed across groups (terms vs. groups).

Red cells at the intersection of the columns and rows indicate the corresponding terms are often discussed together in the reference set.

Blue cells indicate few references contain both terms.

White cells indicate no significant association in either direction.

**RefViz Software: \$328.90 (including GST)
Free Trial available - <http://refviz.ampl.com.au> (Windows & Macintosh)**
